WORLD WAR WHALE - EXPLANATION OF ~95% SHORT VOLUME FOR IXG (iShares Global Financials ETF) - April 14, 2021

DD

APES, I have GREAT news, but the data may be deceiving.

I initially [commented](#) on [this post](#), but I decided to make a post for visibility purposes.

There are long whales in a massive battle for control. \$GME seems to be the battle ground, and we may have passed a threshold that shows our tendies are coming (shorts are fuk).

Here are the three main points:

PART 1 - IXG HOLDINGS & INSANE SHORT VOLUME

IXG (iShares Global Financials ETF) has an insane short volume in the past few days as you can see in [u/friedmice's](#) post.

[Credit to u/friedmice](#)

IXG is an ETF for major **bank stocks**, including:

Berkshire Hathaway, **JPMorgan Chase & Co**, **Bank of America**, AIA Group, Wells Fargo, Citigroup HSBC Holdings, Royal Bank of Canada, **Morgan Stanley**, Commonwealth Bank of America

Twist: The 2nd largest institutional owner of JPMorgan is Black Rock Inc. with 192 million shares. The 3rd largest institutional owner of Bank of America is Black Rock Inc. with 509 million shares.

I will explain the significance of JPMorgan, Morgan Stanley, and Bank of America in part 3 (Team Rocket).

IXG is 'an exchange traded fund launched by BlackRock, Inc. The fund is managed by BlackRock Fund Advisors.'

Believe it or not, the huge red candles are most likely a bullish indicator, not a bearish one.

So, why is the short volume so high on IXG?

PART 2 - SHORT VOLUME != SHORT INTEREST

Apes don't like shorts. Keep in mind, however, that short interest and short volume are two different things.

Short interest is the number of shares that have been sold short but have not yet been covered or closed out (**Melvin**). This is when an institution is betting the price of a stock will go down.

Short volume is measured from the perspective of the **Market Maker**.

THE SHORT VOLUME COMES FROM MARKET MAKERS SELLING BORROWED STOCKS TO DELIVER SHARES TO EAGER BUYERS

If many people want to purchase IXG shares while no one is selling, the Market Makers will borrow the shares to increase liquidity in the market. **This is not them betting on the price to go down, this is the MM providing liquidity which they are required to do by law.**

The short volume being so high indicates that the only people willing to sell shares of that ETF are the market makers. This is an indication of what big money sees as a safe haven.

****KEEP IN MIND: GME SHORT INTEREST IS WELL OVER 100% (POSSIBLY MUCH HIGHER). DON'T GET TOO CONFUSED TRYING TO UNDERSTAND THE DIFFERENCE BETWEEN SHORT VOLUME AND INTEREST.***

Edit #1: I think it's important to be specific here.

Market Makers short selling stocks to provide liquidity is built into the system. In fact, MMs create synthetic shorts in most illiquid stocks. However, GameStop is an exceedingly unique case. They took advantage of the Naked short selling in order to manipulate the price of \$GME into the dirt. Now that their bankruptcy bet didn't pay off, they are stuck resetting FTD clocks with ITM calls.

Market Makers have been naked short selling for years as part of normal market mechanisms. I assume it wasn't until a few years ago that Citadel discovered they could take advantage of this trick to manipulate the market. However, they got caught with their dick in the cookie jar...

Eventually, the synthetic shares of \$GME will need need to be repurchased. This will be the ticket to the moon

<https://www.sec.gov/investor/pubs/regsho.htm> Section 1. D(II) "'Naked' short selling is not necessarily a violation of the federal securities laws or the Commission's rules. Indeed, in certain circumstances, **"naked" short selling contributes to market liquidity**. For example, broker-dealers that make a market in a security[4] generally stand ready to buy and sell the security on a regular and continuous basis at a publicly quoted price, even when there are no other buyers or sellers. Thus, market makers must sell a security to a buyer even when there are temporary shortages of that security available in the market. **This may occur, for example, if there is a sudden surge in buying interest in that security, or if few investors are selling the security at that time.** Because it may take a market maker considerable time to purchase or arrange to borrow the security, **a market maker engaged in bona fide market making, particularly in a fast-moving market, may need to sell the security short without having arranged to borrow shares.** This is especially true for market makers in thinly traded, illiquid stocks as there may be few shares available to purchase or borrow at a given time."

So, why is it important that IXG may be speculated to be a "Safe Haven"

PART 3 - WORLD WAR WHALE

There is a Financial War over control of the DTCC (JPMorgan/Black Rock vs. Citadel)

To preface, I am building off of DD researched by [u/yosaso](#). The thesis from ["There is a WAR to control the DTCC and GME is the BATTLEGROUND: Citadel & Co VS JPM/BOA & Co"](#) is that there is an **ongoing war between the whales for control over the DTCC**. If you haven't read that yet, I highly encourage you to do so.

There is currently a STOCK ALLOCATION for the DTCC BOARD. The fat cats are battling for control.

"Makeup of DTCC Board:

JP Morgan - 4

BOA - 3

Citadel - 3

Morgan Stanley - 2

BNY Mellon - 2

Virtu - 2

Goldman Sachs - 1

Citi - 1

State Street - 1

UBS - 1

TEAM ROCKET (GME)

JP Morgan, BOA, Morgan Stanley, State Street, Goldman Sachs - 11

TEAM SUCK BALLS UNTIL YOU CHOKE

Citadel, Virtu, Citi, UBS - 7

TEAM UNKNOWN

BNY Mellon - 2

"My guess is that TEAM ROCKET (GME) is in control. They're pushing these new rules and regulations. BUT, TEAM SUCK BALLS UNTIL YOU CHOKE is trying to gain more power and influence in the DTCC."

Disclaimer: Some of these positions are speculative. There is no way to know where these institutions truly want moon or doom (aside from Shitadel of course)

WHAT DOES THIS MEAN?

Black Rock, Vanguard, and Morgan Stanley are large institutional investors in \$GME. Black Rock also holds high positions in JPMorgan and Bank of America.

Shitadel desperately wants \$GME to fail. They are in a battle against other whales for control of the DTCC and future of our financial markets.

The immense buying pressure on IXG (which holds Banks that are on Team Rocket) could point to a shift in the Battle of the Whales.

Big money may be investing large sums of cash and holding as a hedge against other financial institutions collapsing.

>**GameStop clears debt and approaches possible recall/dividend**

>**Citadel, Melvin, shorts on GME get fuk**

>JPMorgan, BoA, Black Rock collect their scalps and seats on the Board of the DTCC

If these large financial institutions are trying to end Citadel and Susquehanna, it is not to benefit us. They want to kill competition and seize power. We are an externality.

Keep in mind, DD covering the financial institutional battle is somewhat speculative. It is hard to interpret motives of large financial institutions, especially ones that thrive in misinformation.

Not financial advice.

If you're interested in researching the World War Whale, I encourage you to read these posts:

 4. [There is a WAR to control the DTCC and GME is the BATTLEGROUND: Citadel & Co VS JPM/BOA & Co](#)
 5. [BlackRock is about to delete Shitadel out of existence.](#)
 6. [Financial mafias and equity swaps – and how one prime broker rules them all](#)
-

Edit #2: It's VERY important to reiterate that we can never be sure who is on the side of the moon mission. Some apes are skeptical of Bank of America, so I heavily encourage you to comb through [this DD, specifically Point #5 and #6](#).

Please do your own research and come to your own conclusions. These are financials conglomerates with tentacles dipped into **everything**. Reading [this post](#) can give you an idea of how far their leveraging and loans go.

Remember: Susquehanna is heavily shorted on \$GME, yet they have a massive long position. There could be whales with a vested interest in GME mooning while at the same time owning puts. _____

TL;DR

We may be witnessing the biggest financial battle in history. The current market behaviors of IXG may be an indicator that Team Rocket (GME) is winning.

IXG is an ETF with holdings of JPMorgan, Bank of America, and Morgan Stanley, who all have a vested interest in the demise of Shitadel in order to gain power and influence.

High short volume on IXG is indicative of large buying pressure and few sellers. Market makers must borrow and sell the stock to appease buyers.

Current trends suggest Big Money wants to back their money with Team Rocket.

TA;DR
