Do You Know Where Your GME Bananas Are?

Over 30% of GME Bananas are Missing from Bloomberg Terminal

Over 30% of GME bananas are missing from Bloomberg Terminal. Over 69% of GME is trading off exchanges or in an unreported Dark Pool? It's National Banana Day -Do you know where your GME bananas are? - Apr. 21, 2021

Due Diligence

So yesterday I posted about **FINRA ADF** showing up as the primary exchange for GME trades over the past 6 trading days (and likely much longer). The thing is, FINRA ADF is not currently in operation...

https://www.reddit.com/r/Superstonk/comments/muzj4o/finra_webmaster_no_brokerdealers_currently_using/

u/koreanjc had a great post about this a little over a week ago FADF - A Dark Pool

While looking into this, I realized that the GME Bloomberg Terminal data is missing between 31.4% and 38.9% of GME daily trading volume from 4/13 - 4/20.

That's **19,411,389 missing bananas** over just 6 trading days. Only 70 million GME-issued bananas are supposed to exist...

If you add up the **total missing volume** + **ADF volume**, you will see that **over 69%** of GME bananas are being reported as trading off exchange (FINRA ADF, which is reportedly not in operation - again see my post from yesterday), or completely missing (a deeper, darker pool that even Bloomberg can't see?).

40,126,778 GME bananas were traded over 6 days, and even Bloomberg, which costs $24,000/year, has no idea where they are.

I'm not a finance guy, or a stock guy - I'm an ape. I can't really do math, but luckily Excel does the math for me.

I don't play options, but if I had call options for 4/16 or 4/23, which are each worth thousands and thousands of dollars, I would certainly want to know what unknown entity is keeping the price of GME at this $160 threshold by hiding **40,126,778 bananas** from making their way to the exchanges.

TLDR - each day, over **69%** of GME bananas are either missing, or being routed through "**FINRA ADF**", which is not currently operating. Someone is hiding your GME bananas to artificially manipulate the GME stock price from mooning. The rocket is fueled for take-off. Can anyone find out what is going on with the missing bananas?

Source: nasdaq.com. Why is the actual daily volume so much different than reported Bloomberg volume? Where are the missing bananas?

Edit 2: Edited the Excel sheet to reflect the Nasdaq daily volume (I had used a different source, which had slightly different Total Volume data).

The total missing bananas **increased** from 19,285,389 to **19,411,389**. Also edited the missing banana data for each Bloomberg terminal to reflect Nasdaq. Thanks [u/2008UniGrad]

Edit 3: Added Bloomberg Terminal from 4/21 (below) and added updated Excel sheet to reflect 4/21 data (also below). Updated total missing bananas to reflect 4/21 data.

Total missing bananas for last 7 trading days = **20,798,855 bananas**

Total missing bananas + **ADF** for last 7 trading days = **42,644,089 bananas**

Dark Pool DD Summary and A Quick Update on all those Missing GME Bananas

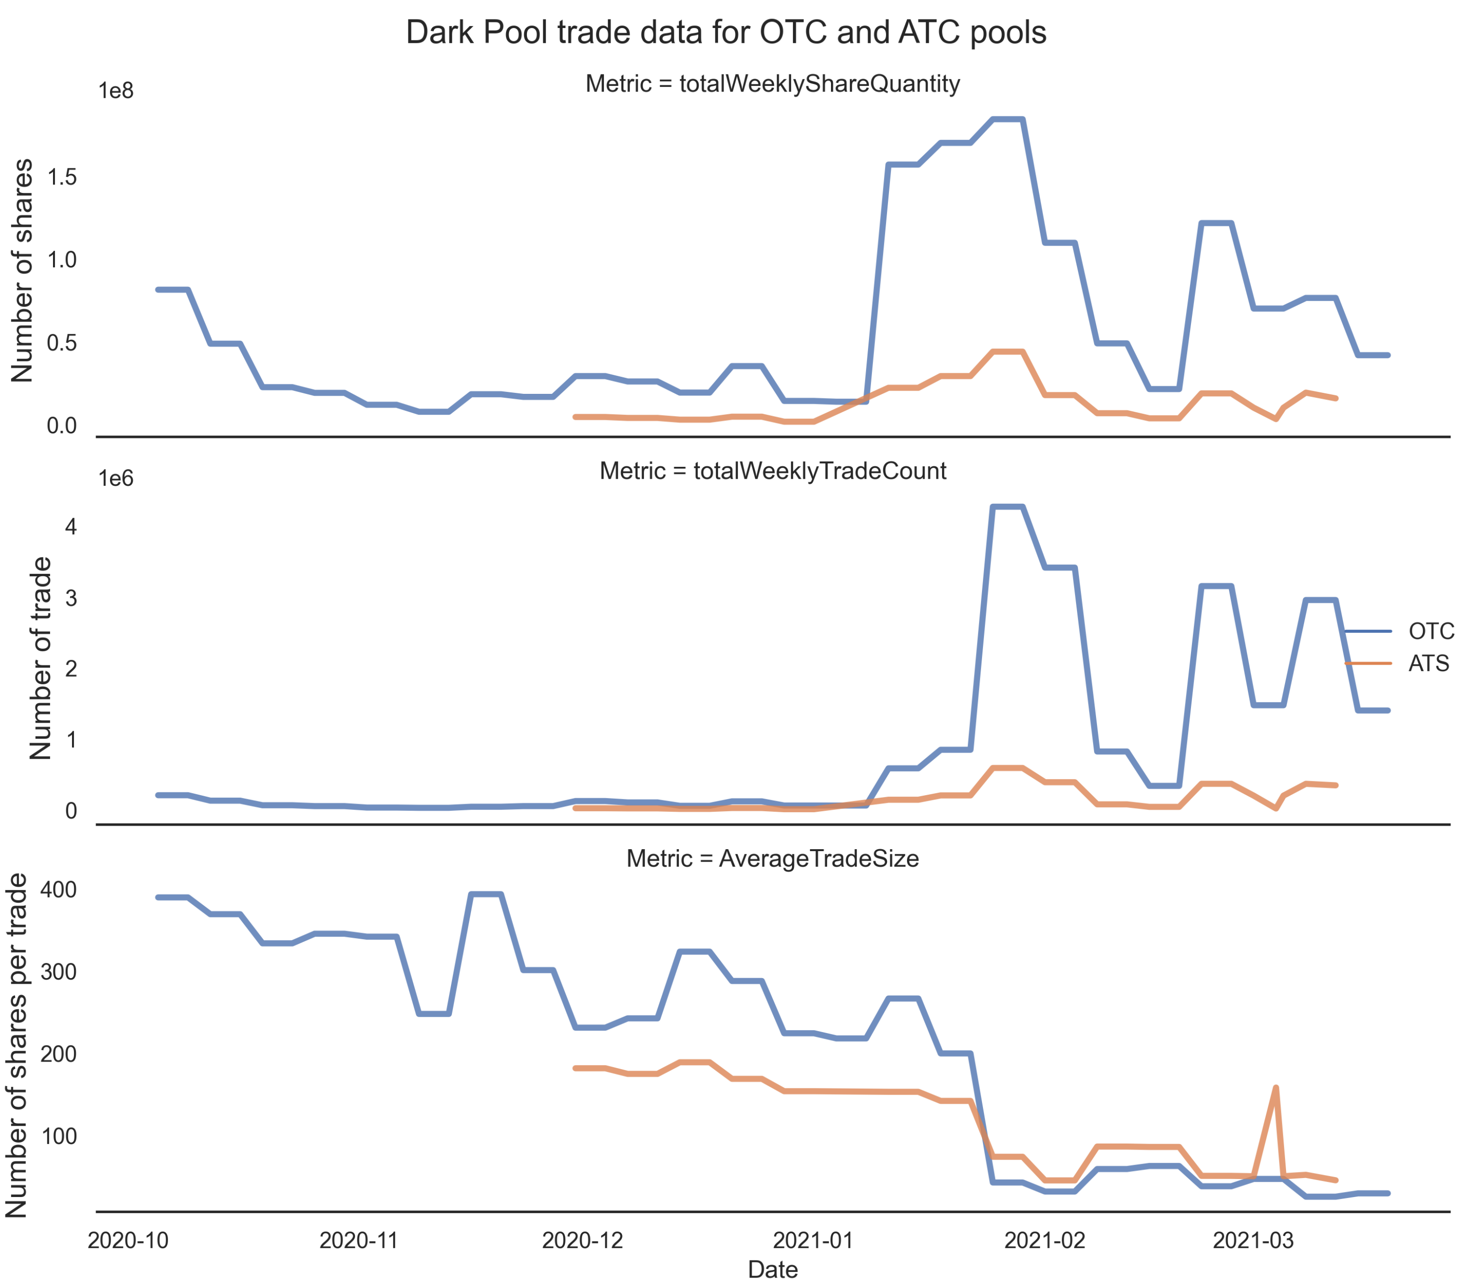
Due Diligence

Hey guys.

I just wanted to do a quick update on my [Missing Bananas post]() and relate it to some of the Dark Pool DDs that others have submitted this week to kind of drive the point home.

[u/broccaaa]() had a DD post about [FTDs and Massive Dark Pool Activity]() . His brain is wayyy wrinklier than mine and the detail of this research is truly amazing.

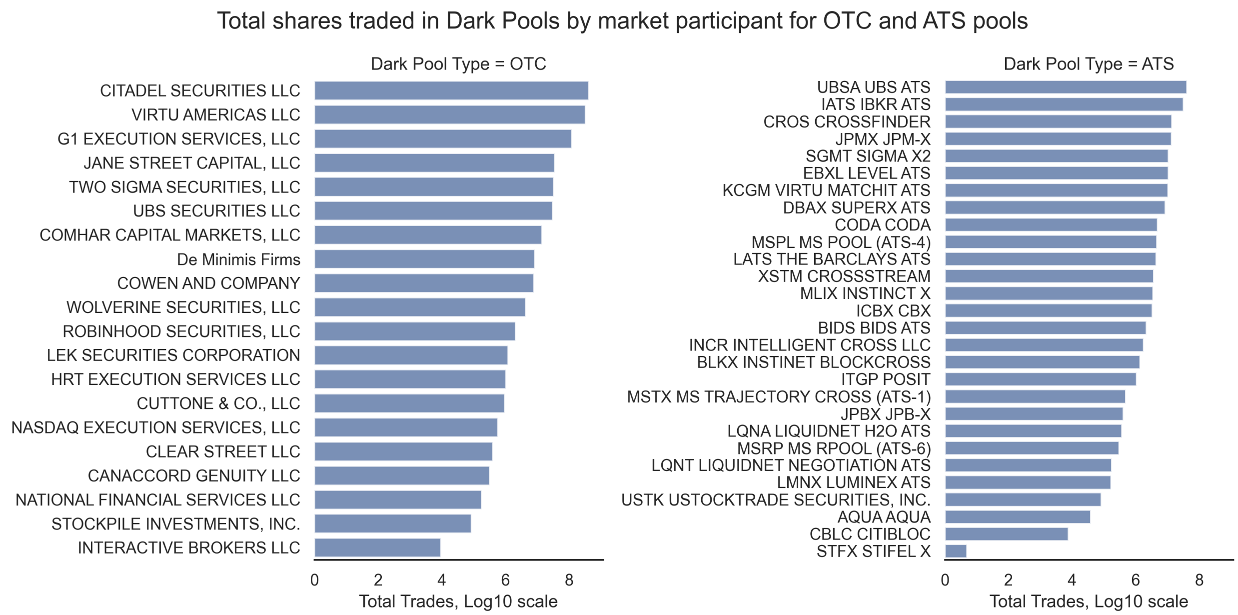
One of the big takeaways relating to OTC / dark pool trading can be summarized in this graph from his [post]():



Dark Pool trade data for OTC and ATS trade pool.

u/broccaaa concludes that "Dark Pool activity ramped up massively at the start of January," the "total number of trades more than quadrupled," and "the average trade size dropped to around 50 shares per trade, remaining there ever since."

This table (also from his post), shows the main Dark Pool participants (Shitadel being #1):



Total shares traded by firm for OTC and ATS pools since Jan.

Definitely take another look at his DD if you have a chance!

---

u/Doom_Douche had a great DD post, A Deep Dive into Dark Pool Trading, where he shows how much more dark pool trading is happening with GME compared to other stocks. Again, super wrinkley stuff...

One big takeaway from this post was that these conclusions were made using an estimated GME float of **54.1 million** rather than the **26.7 million** that we can now deduce from the **GME Proxy**...

Using this table from his post,

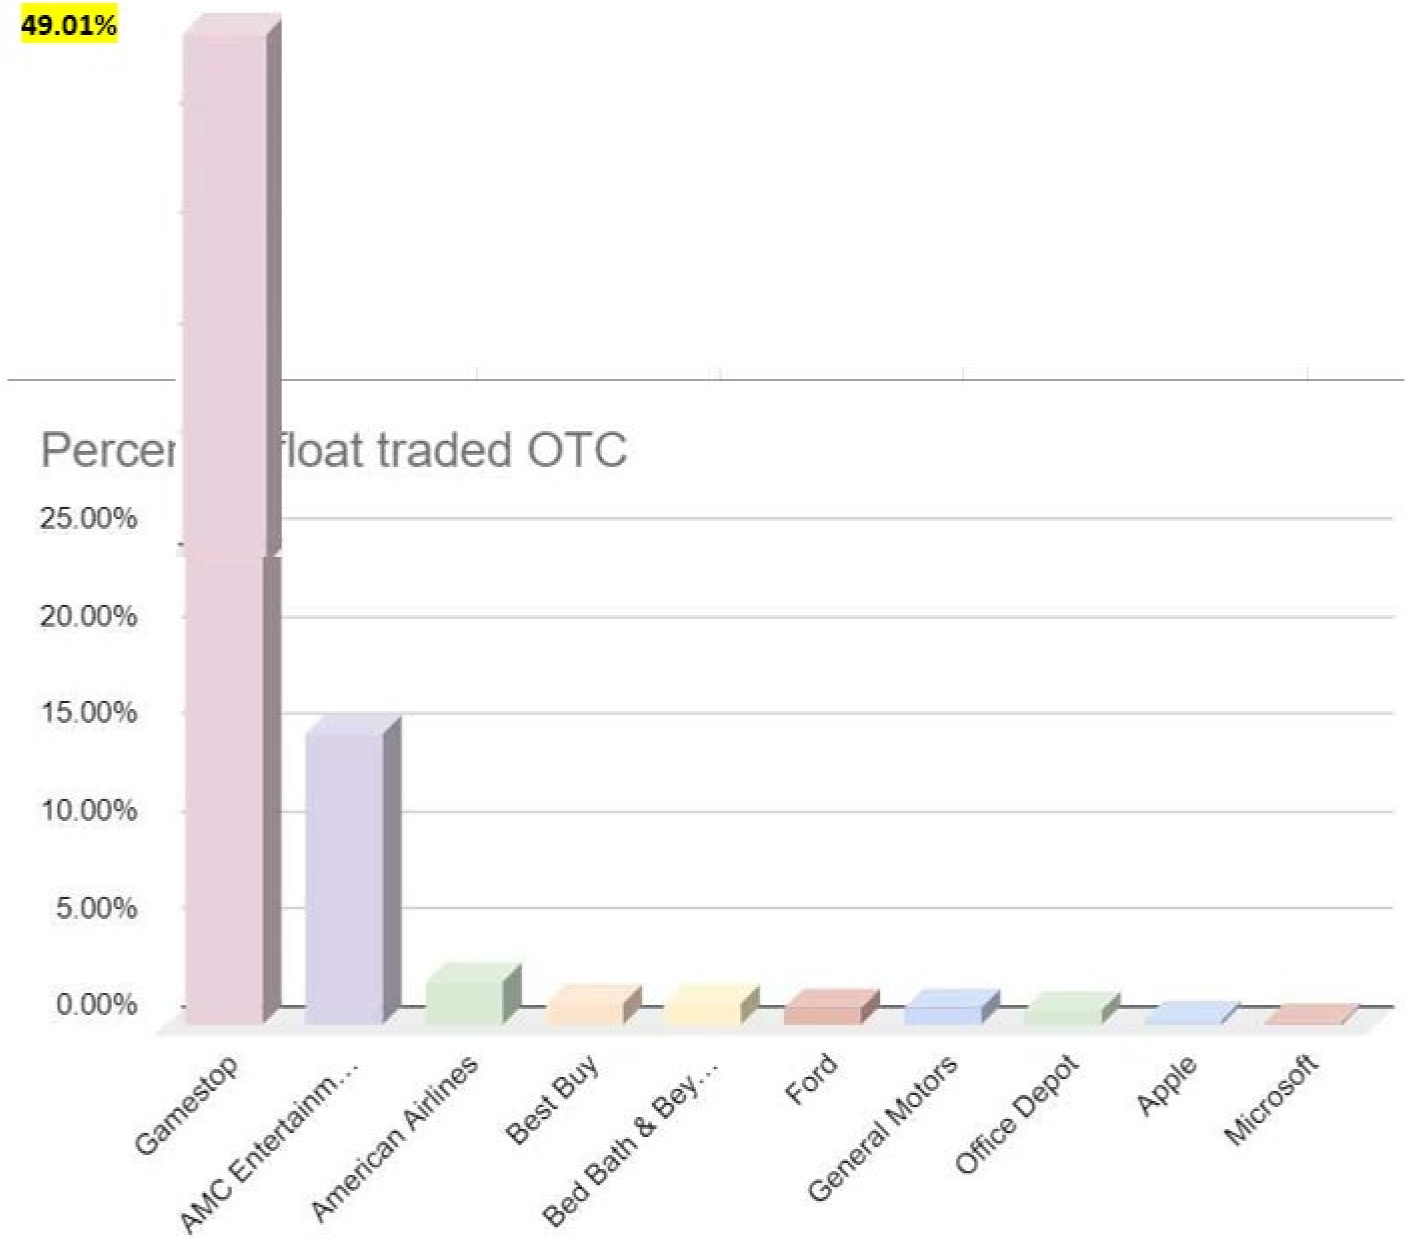
1	Date	Company	Ticker	Float	Shares Traded OTC	# of Trades	Avg Shares/Trade	% of Float Traded OTC
2	Monthly AVG	Gamestop	GME	54,160,000	13,085,490	268,561	49	24.16%
3	Monthly AVG	AMC Entertainn	AMC	233,010,000	34,919,889	155,415	218	14.99%
4	Monthly AVG	American Airlin	AAL	632,660,000	14,517,221	86,806	167	2.29%
5	Monthly AVG	Best Buy	BB	555,290,000	6,059,563	32,732	184	1.09%
6	Monthly AVG	Bed Bath & Bey	BBY	229,430,000	2,445,162	25,027	96	1.07%
7	Monthly AVG	Ford	F	3,840,000,000	33,511,123	136,073	246	0.87%
8	Monthly AVG	General Motors	GM	1,370,000,000	11,261,087	68,319	166	0.82%
9	Monthly AVG	Office Depot	ODP	51,700,000	383,329	4,671	81	0.74%
10	Monthly AVG	Apple	AAPL	16,870,000,000	37,711,390	271,325	140	0.22%
11	Monthly AVG	Microsoft	MSFT	7,540,000,000	10,277,800	104,660	98	0.14%

And making that little adjustment to the updated GME float...

Date	Company	Ticker	Float	Shares Traded OTC	# of Trades	Avg Shares/Trade	% of Float Traded OTC
Monthly AVG	Gamestop	GME	26,700,000	13,085,490	268,561	49	49.01%

Updated GME Float to 26.7 million - 49% of GME float traded OTC

Here's an approximation of what the updated graph would look like (Ape doesn't know how to make a new one)



Percent of Float Traded OTC - GME vs. Others

Yeah... I felt that too!

Now for my updated post

Thanks [u/WSBdickhead]() for the updated Bloomberg Terminal screenshots. These are all streamlined to include the entire premarket and afterhours (4:00 - 20:00 EST). He was also able to change a few settings on the Default search criteria to include "Odd-lots" and potentially some other black magic that my brain was too smooth to understand.

Long story short - the "Custom" search criteria in the Bloomberg screenshots now equals the Nasdaq total daily volume. So no more missing bananas???

Not so fast... Let's analyze that data a little further. The missing volume is still not reporting on any of the Bloomberg exchanges. So these missing bananas are not even going through the **"FINRA ADF"** dark pool and therefore must be traded through some other **OTC dark pool** that is **deeper** and **darker** than whatever dark pool data is being reported as **"FINRA ADF"**.

What we see by comparing the data is actually really interesting and I'd love some feedback on how we can use it, and what we can do with it.

Do we now have a window into the daily OTC / dark pool trade volume???

Total Volume data (**Custom**) - **Bloomberg** reported data = missing bananas (**OTC**)

FINRA ADF + missing bananas (**OTC**) = % of daily volume traded off-exchanges

I'll make a few more calculations from this updated data at the bottom of the post (see Excel screenshots).

Thanks again u/Ravada for the daily Bloomberg Terminal drops!

New 4/13 - 69.38% daily volume traded off-exchange

What changed?

Now Custom = Total daily volume. So these bananas aren't necessarily "missing", but are most definitely traded OTC / Dark pool.

Adding FINRA **ADF** volume + **OTC** (other?) volume means that **69.38%** of 4/13 daily volume was traded off-exchange / in dark pools.

New 4/15 - 70.61% daily volume traded off-exchange

Adding FINRA **ADF** volume + **OTC** (other?) volume means that **70.61%** of 4/15 daily volume was traded off exchange / in dark pools.

I'm going to take a few shortcuts for the rest and just show you the new terminals and have the % off-exchange in the captions.

New 4/20 - 69.41% of daily volume traded off-exchange

I don't have streamlined (4:00 - 20:00 EST) Bloomberg Terminal screenshots of 4/21 or 4/22, but 4/21 had roughly **66.53%** of volume traded off-exchange and 4/22 had **67.06%** of volume traded off-exchange.

Below is the raw data that I extracted from the terminals and calculations. The number of bananas traded **OTC** is highlighted, as is the total number of bananas traded off-exchange (OTC + ADF).

45,453,445 bananas were traded off-exchange over 8 low-volume trading days - that's **170.24%** of the GME float!

92.44% to 94.99% of Daily Trades are made Off-Exchange

All of the **smallest** trades are being made off-exchange. Look at the difference between size of trade (Bloomberg) and size of trade (Custom), which is the average size for the entire day. Now, I understand that most retail trades less than 100 shares are not routed to the exchange, but **over 92% of all trades** are routed through either "**FINRA ADF**" (dark pool) or traded **OTC** (darker pool).

People seem to pay attention when numbers are presented as money ($$$) so maybe someone will pay attention if we put some $$$ figures on what's been going on.

Billions of dollars spent on GME are routed through Dark Pools

Over 6 days of low volume trading, **$8.919 billion** was spent on GME bananas. Good work apes!

They routed **$2.95 billion** through **OTC dark pools** and **$3.33 billion** through "**FINRA ADF**". Adding those together, **$6.281 billion** was routed off-exchange, accounting for **70.43%** of the 6-day total (**$8.919 billion**).

Only $2.638 billion actually went through the exchanges.

This data seems to corroborate the DDs posted by u/broccaaa and u/Doom_Douche . And it seems abundantly clear that GME trades are being handled much differently than any of the other stocks that were investigated, both in terms of size of trade (the smallest trades are routed to darkest of dark pools), and percent of float (49% of GME float) that is traded OTC.

If we take the missing bananas for what I believe them to be (traded off-exchange in OTC dark pools), then **170.24%** of the **GME float** was traded in OTC dark pools across 8 low-volume trading days...

TLDR: **Over 90%** of GME trades from 4/13 - 4/20 were routed through dark pools (**FINRA ADF** or **OTC**). **Over 70% ($6.28 billion)** of the money that was spent on GME bananas over this 6-day trading period was routed through dark pools (**FINRA ADF** or **OTC**). We may now how a way of tracking daily OTC / Dark pool numbers rather than waiting 2-4 weeks for FINRA data. They can't keep this up forever, especially if we can bring some attention to their corrupt antics for manipulating GME. And don't forget to VOTE!
